

News Release

ExxonMobil and INNIO support energy supply to medbo District Hospital in Regensburg

Hamburg/Jenbach, October 6, 2020

In recognition of the tireless work of staff at the medbo District Hospital in Regensburg, Germany, during the coronavirus pandemic, energy companies ExxonMobil and INNIO Jenbacher are providing support for the upcoming service of the hospital's energy supply center. As an act of solidarity, the two companies are supplying a total of 315 US gallons (1,200 liters) of Jenbacher N Oil 40 engine oil and performing the oil change for the advanced combined heat and power (CHP) plant – all at no charge. Two INNIO Jenbacher gas engines provide the hospital with power, heat, and refrigeration and are lubricated with high-grade ExxonMobil engine oil.

By undertaking this initiative, ExxonMobil and INNIO are helping ensure that the Regensburg healthcare facility has a reliable and flexible energy supply while at the same time recognizing the amazing dedication of hospital staff. The oil change will be carried out by the INNIO services team during the next planned maintenance and will mean that the hospital is best prepared for the forthcoming heating season.

“We are delighted to play a small part in enabling regional healthcare facilities to continue fulfilling their vital role,” explained Frank Heber from ExxonMobil. “We have utmost respect for the hard work and dedication of all those involved in the medical and healthcare sectors,” stated Heber. “We wanted to show our solidarity not just through words, but also by giving practical support.”

At the heart of the economical and environmentally responsible CHP plant are two Jenbacher J312 natural gas engines which can together generate more than 1 MW of power. That is equivalent to the electricity demand of around 2,000 Regensburg homes. “Hospitals need a great deal of energy to ensure a secure power supply as well as to provide for patient comfort. In addition, our energy consumption is increasing year on year as more technology comes into use,” explained Robert Lorenz, Workshop Manager for Medical Facilities in the Upper Palatinate District (medbo KU). “The INNIO Jenbacher engines allow us to cover a large proportion of our power, heat and refrigeration requirement in a reliable way without depending on the electricity grid,” added Lorenz.

“We would like to thank everyone working in the medical service at the medbo District Hospital in Regensburg and the free oil change is our way of helping ensure the smooth operation of the facilities,” explained Joachim Maier, Director of INNIO Jenbacher GmbH in Germany. “This not only makes an important contribution toward securing the power supply to critical infrastructure in Regensburg, but it also paves the way toward a climate-neutral future for energy in Germany. This is because CHP plants, such as the one in Regensburg, need much less fuel and produce much lower emissions than conventional systems with separate power and heat generation.”

About ExxonMobil

ExxonMobil is one of the world's largest publicly traded energy concerns, employing around 70,000 people across all continents. The company undertakes oil and gas exploration, production, and processing and also markets finished products. This includes lubricants for all manner of vehicles – from Formula E racing cars to domestic automobiles and trucks – as well as industrial applications.

News Release

ExxonMobil, at the forefront of lubricant technology for many years, continues to develop new lubrication solutions while working in close partnership with OEMs to adapt to changing market requirements. ExxonMobil owns or co-owns over 21 refineries, numerous petrochemical facilities and lubricant manufacturing plants, making it one of the biggest chemical companies in the world. The company is a well-known marketer of fuel oil and specialties. Its fuels are sold at more than 20,000 gas stations globally.

About INNIO

INNIO is a leading solutions provider of gas engines, power equipment, a digital platform, and related services for power generation and gas compression at or near the point of use. With our Jenbacher and Waukesha product brands, INNIO pushes beyond the possible and looks boldly toward tomorrow. Our diverse portfolio of reliable, economical, and sustainable industrial gas engines generates 200 kW to 10 MW of power for numerous industries globally. We can provide life-cycle support to the more than 52,000 delivered gas engines worldwide. And, backed by our service network in more than 100 countries, INNIO connects with you locally for rapid response to your service needs.

Headquartered in Jenbach, Austria, the business also has primary operations in Welland, Ontario, Canada, and Waukesha, Wisconsin, US. For more information, visit the company's website at www.innio.com. Follow INNIO on Twitter and LinkedIn.
