

PRESS RELEASE**INNIO Group announces second Jenbacher production facility in Hall in Tirol**

- INNIO Group is expanding its production capacity in Hall, Tyrol, for its future-ready Jenbacher energy solutions.
- The modern manufacturing facility for Jenbacher engine components spans more than 4,000 square meters.
- The new facility enables continued growth and reinforces long-term prospects.

JENBACH, Austria – April 9, 2025 – INNIO Group, headquartered in Jenbach, is expanding its production capacity with about 4,000 square meters of space at a new site in Hall in Tirol, Austria. The facility will manufacture components such as cylinder liners, valve train components, and general parts for Jenbacher engines.

The infrastructure for a modern component manufacturing facility is currently being put into place. INNIO Group will relocate existing systems from Jenbach and install new equipment at the Hall site this summer. Operations are set to begin in the fourth quarter, with completion scheduled for 2026 and an additional expansion phase planned for 2029.

One driver of the expansion is the dynamic development of artificial intelligence, which presents new challenges to global energy systems. Public power grids often are unable to meet the massive power demands needed to operate AI data centers. This underscores the importance of scalable, decentralized power plants for independent energy supply, such as the Jenbacher engines from Tyrol, which are used around the globe.

“Our new Plant 2 represents a strong commitment to the future and growth – and to our manufacturing site in Tyrol,” said Martin Mühlbacher, site leader at INNIO Group in Jenbach. “At the same time, we are expanding our reach for skilled workers in Hall who want to contribute to the manufacturing of the globally demanded Jenbacher energy solutions. We offer a whole host of attractive opportunities, particularly for metal technicians, mechanical technicians, and CNC operators.”
